## WAVE BIOREACTORS ADDED TO MACROGENICS cGMP MANUFACTURING FACILITY

January 9, 2006

Somerset, NJ - Wave Biotech, LLC, ([www.wavebiotech.com](http://www.wavebiotech.com)) has announced that MacroGenics, a biotechnology company headquartered in Rockville, Maryland, has installed 200-liter Wave Bioreactors® in its new facility. The Wave Bioreactors will enable MacroGenics - which is focused on the development, manufacture, and commercialization of immunotherapeutics for autoimmune disorders, cancer, and infectious diseases - to produce monoclonal antibodies under current Good Manufacturing Practice (cGMP) standards.

"Wave Biotech's disposable cell culture technology is ideal for the MacroGenics application because it is scalable, up to 500 liters," said Vijay Singh, founder & president of Wave Biotech. "Our large scale bioreactors use proprietary technology which has been tested and refined for the last 5 years, and we can also roll-in a large scale 500 liter production capability bioreactor into an existing facility today, without the requirements of piping or steam," added Singh, who is the inventor of the Wave Bioreactor. "There is no waiting period. All that is needed is to plug and play."

MacroGenics officially opened their new state-of-the-art manufacturing facility on October 19th, 2005.

### About Wave Biotech

Wave Biotech is a research-based company that develops and manufactures innovative process equipment for the pharmaceutical and biotechnology industries. The Company's focus is on developing disposable bioprocess equipment for the operation traditionally requiring stainless-steel tanks and piping. Key products, such as the Wave Bioreactor, WaveMixer®, FlexMixer®, and Sterile Tube Fuser, feature disposable contact materials that eliminate cleaning and validation, thereby reducing costs in operations ranging from cell culture, media preparation, and buffer dissolution and thawing process intermediates to patient specific cell therapy in hospitals. These unique, patented, devices can be installed and commissioned rapidly, thereby drastically reducing the time-to-market for biological products. Wave Biotech's equipment is in use with hundreds of companies worldwide, both for R&D, as well as commercial applications.
